Allied Command Transformation's (ACT) Operational Experimentation Branch recently participated in NATO Consultation, Command and Control Agency's (NC3A) Ballistic Missile Defence (BMD) Civil Military Information Exchange Table Top Exercise.

The role of the exercise was to identify and detail information exchange requirements between NATO and civil entities.

This is part of BMD Capability Development, supporting the Civil Emergency Planning Community at NATO and throughout the alliance.

The programme was originally conceived at the Lisbon Summit and is an important part of ACT's on-going programme of work managed by Command, Control, Communications, Computers, Intelligence, Surveillance and Reconnaissance (C4ISRN) Division.
