

For the short version of the [article](#) .

**The 2011 exercise enforced many major achievements, more is expected while planning for the 2012 annual event in Poland.**

## **Interoperability Focussed Forum**

The NATO Coalition Warrior Interoperability exploration, experimentation and examination eXperiment (CWIX) is a Military Committee directed, North Atlantic Council (NAC) endorsed and and Consultation, Command and Control (C3) Board guided Bi-Strategic Command (Bi-SC) programme designed to support the continuous improvement in interoperability for the Alliance. The CWIX programme provides an opportunity for NATO Nations, Partner Nations, Contact Nations, and NATO Agencies to prove, disprove, and improve NATO, National and Coalition Consultation, Command & Control, Communications, Intelligence, Surveillance and Reconnaissance (C4ISR) interoperability. CWIX is also a forum for interoperability testing of operational systems currently in use by NATO-led operations such as International Security Assistance Force (ISAF) and NATO Response Force (NRF).

# CWIX 2012 Addresses the Core of NATO Efficiency: Interoperability (Expanded Version) - ACT

Written by Lieutenant Colonel Stephan Siemens, German Army, C4ISR & NNEC
