

ALLIED COMMAND TRANSFORMATION

TESTING NATO TECH

NATO is undergoing a major digital transformation on the road to becoming a Multi-Domain Operations-enabled Alliance.

The first step of this process is moving all NATO networks to cloud technology, including NATO's classified networks.

This not only provides enhanced security but also gives the Alliance a more mobile workforce.

Once data is in a classified cloud environment it can be coupled with AI tools to give commanders instant, actionable insights when they need them most.

The first place NATO will see these technologies at work is at the Joint Analysis Training & Education Centre (JATEC).

"Russia is learning fast and we need to learn even faster."

- ADM Pierre Vandier, Supreme Allied Commander Transformation
